

Cross-Country Results: Replication Package

Code

Contains code to reproduce cross-country tables (table 3, tables a10-20). **_master.R** is a master script that runs the entire analysis. To run the analysis, the “project_file_path” parameter needs to be changed to point to the replication package directory. The project assumes the following directory setup:

```
/Project Directory
  /Code — All code files here
  /Data — All .csv/.Rds files here
  /Outputs
    /tables — .tex files from code will be outputted to here
```

Outputs

LaTeX tables generated from the code are outputted to Outputs/tables. results.tex compiles the tables into one document

Data

Data is saved in .csv and .Rds formats. There are three datasets:

chinese_aid_projects

A dataset at the Chinese aid project level. Includes the following variables:

Variable	Description	Values
sector	Aid project sector	text
title	Title of the aid project	text
sample	Whether the project has enough geographic and temporal information to be included in the analysis sample	1 = True 0 = False
completed_near_china.pl10	Whether the project is within 30km of a completed Chinese aid project (using 2010 as the planned cut-off year)	1 = True 0 = False
planned_near_china.pl10	Whether the project is within 30km of a planned Chinese aid project (using 2010 as the planned cut-off year)	1 = True 0 = False

us_aid_projects

A dataset at the US aid project level. Includes the following variables:

Variable	Description	Values
sector	Aid project sector	text
title	Title of the aid project	text

sample	Whether the project has enough geographic and temporal information to be included in the analysis sample	1 = True 0 = False
completed_near_usaid.pl10	Whether the project is within 30km of a completed US aid project (using 2010 as the planned cut-off year)	1 = True 0 = False
planned_near_usaid.pl10	Whether the project is within 30km of a planned US aid project (using 2010 as the planned cut-off year)	1 = True 0 = False

afro_china_data

A dataset at the Afrobarometer survey level. Includes the following variables

Variable	Description	Values
afro.round	Afrobarometer round	Integer
iso	Country iso code	text
townvill	Town/Village name	text
age	Age of respondent	Integer
muslim	Whether the respondent identifies as Muslim	1 = True 0 = False
urban	Whether the respondent lives in an urban area	1 = True 0 = False
male	Whether the respondent is a male	1 = True 0 = False
distance_capital	Distance to the capital (in kilometers)	Numeric
in_leader_adm1	Whether the respondent lives in the administrative 1 region where the leader (eg, president) was born	1 = True 0 = False
riotsprotests_china_before1stplanned_average	Number of protests within 30km before the first Chinese project was planned within the same radius (average annual)	Numeric
riotsprotests_china_usaid_before1stplanned_average	Number of protests within 30km before the first Chinese or US project was planned within the same radius (average annual)	Numeric
trust_index	Additive index of the number of the following that the respondent trusts: police, local council, parliament, president and courts of law.	Integer
democ_high_qual	Overall, how satisfied are you with the way democracy works in	1 = Very or fairly satisfied 0 = Not very or not at all satisfied, or says

		the country is not a democracy
refuse_pay_tax	Whether the respondent has refused to pay tax or fee to government during the past	1 = Yes (Often, Several times, Once or Twice) 0 = No (Would if had the chance, Would never do this)
gov_right_tax	The tax authorities always has the right to make people pay taxes	1 = Strongly agree or agree 0 = Strongly disagree, disagree or nether agree nor disagree
easy_avoid_tax	Based on your experience, how easy or difficult is it to avoid paying the income or property taxes that you owe to government?	1 = Very easy or easy 0 = Very difficult or difficult
[completed, planned, implementing or noyeardata]_near_china.pl[08 or 09 or 10].[bin or count]	Chinese aid variables. <i>Type</i> The first part of the name defines the type – completed, planned, implementing (ie, active), or noyeardata (where the survey is near a project with no year information). <i>Planned Cut-Off</i> 08, 09, 10 define the planned cut-off year <i>Binary or Count</i> The last part of the variable defines whether the variable is binary or counts (the number of aid projects)	<i>If bin</i> 1 = True 0 = False <i>If count</i> numeric
[completed, planned, implementing or noyeardata]_near_usaid.[bin or count]	US aid variables. <i>Type</i> The first part of the name defines the type – completed, planned, implementing (ie, active), or noyeardata (where the survey is near a project with no year information.	<i>If bin</i> 1 = True 0 = False <i>If count</i> numeric

	<i>Binary or Count</i> The last part of the variable defines whether the variable is binary or counts (the number of aid projects)
